📃 Web Design Assignment: Homepage Layout with HTML & CSS

Objective:

Recreate the web page layout shown in the provided image using **only HTML and CSS**. This assignment will help you understand the structure of a webpage and how to style elements using CSS.

🛠 Instructions:

1. **Structure:**
   - Use **HTML** for creating the structure (headings, sections, images, navigation bar, etc.).
   - Use **CSS** (internal or external) for styling.
   - Create separate sections for:
     - Header with logo and navigation (Home, New, Popular, Trending, Categories)
     - Main feature section (with the large image and article title "The Bright Future of Web 3.0?")
     - Sidebar with "New" articles list (right side, blue background)
     - Three small card-like sections below the main article (with "01", "02", "03")
2. **Colors & Fonts:**
   - Try to **match the colors** as shown in the image (dark blue, red, white, black).
   - Use **basic fonts like Arial, Verdana, or sans-serif**.
   - Ensure there's contrast and readability in your layout.
3. **Responsiveness (Optional):**
   - If you want to go further, try to make the layout responsive using CSS Flexbox or Grid.
4. **Restrictions:**
   - ☐ Do NOT use JavaScript or any frameworks.
   - ☐ Do NOT use Bootstrap or any CSS libraries.
   - ☐ Only use **pure HTML and CSS**.

📁 Submission:

- Submit your project folder containing:
  - `index.html`
  - `style.css`
  - Image files (if used)
- Deadline: **30-May-2025**

⬜ **Bonus Tips:**

- Use **semantic tags** like `<header>`, `<nav>`, `<main>`, `<section>`, and `<footer>`.
- Use `display: flex;` or `display: grid;` for layout alignment.
- Use `:hover` effect on "READ MORE" button for better interactivity.
